

AISHWARYA GHALSASI

Senior Frontend Developer | React.js · TypeScript · Redux Toolkit

Pune, India | a.p.ghalsasi@gmail.com | +91 7875364896 | linkedin.com/in/aishwarya-ghalsasi-a4a510165

PROFESSIONAL SUMMARY

Frontend Engineer with **6+ years** shipping enterprise SaaS products in React.js and TypeScript, including personally owning 2 core Rulestream analytics modules for a Siemens DISW platform — **cutting feature delivery time by 40%** — within a fast-moving 14–20 person product team. Led a class-to-Hooks modernization of a legacy codebase and operates comfortably beyond a pure frontend brief — from requirement analysis to mentoring — in fast-paced Agile teams.

CORE SKILLS

Core: React.js (18), TypeScript, Redux Toolkit, Redux-Saga, React Query, JavaScript (ES6+)

UI/Architecture: Component Design Systems, Design Patterns, MUI, Tailwind CSS, HTML5, CSS3, Responsive Design, Accessibility Best Practices

Integration: REST APIs, GraphQL, Microservices, WebSocket, JWT

Quality & DevOps: Jest, React Testing Library, Git, Jenkins CI/CD, Webpack/Vite

Cloud: AWS (S3, Lambda, CloudFront)

PROFESSIONAL EXPERIENCE

Software Engineer | Pratiti Technologies (Client: Siemens DISW), Pune 2022 – Present

- Personally built and owned 2 of Rulestream's core analytics modules end-to-end — from component architecture through REST API integration — within a 3-member frontend/UX pod inside a 14–20 person product team, **cutting feature delivery time by 40%**.
- Re-architected the dashboard's component library into a reusable TypeScript design system, replacing a fragmented one-off approach and **cutting feature-build time by 2–3 days** for every new feature build.
- Optimized the React rendering pipeline (memoization, code-splitting, lazy loading), improving dashboard load times on data-heavy analytics views.
- Owned frontend delivery for the license management module end-to-end, integrating REST APIs and backend microservices to **increase usage-tracking coverage by 60%** and reduce accounts flagged for misuse across Siemens DISW's enterprise customer base.
- Implemented a reusable React filter component to deliver a single, unified responsive UI across web, Android, and iOS **from one shared codebase**, as part of a 5-member frontend team on the earlier Home Automation Web App.
- Led the migration of a significant portion of the Home Automation Web App's codebase from class-based to functional components with Hooks, modernizing state and lifecycle management and improving long-term maintainability for the team.

Software Engineer | JetaTech InfoServices (Client: Smartworks), Pune 2021 – 2022

- Personally delivered 2–3 ERP modules end-to-end — from requirement analysis through development — while coordinating delivery across a 3-member junior pod for additional modules, operating with a scope closer to a senior IC than the title reflects.
- Built reusable React components and integrated REST APIs with React Query, Tailwind CSS, and MUI across the SaaS-based ERP portal's dashboard and workflow modules.
- Built 1 new API endpoint and provided ongoing support for existing endpoints through hands-on Node.js work, supporting the small team's full-stack delivery needs where roles weren't rigidly siloed.

- Mentored 2–3 newer team members and worked directly with business stakeholders in Agile ceremonies — **reducing rework cycles** by shaping requirements rather than just receiving them.

Trainee Engineer | Tekdi Technologies, Pune 2019 – 2020

- Reduced the open bug backlog by **20%** through focused bug-fixing across frontend and backend issues for e-learning and e-commerce web applications across multiple Agile sprints.
- Contributed to maintain accessibility-conscious markup (semantic HTML, alt text, keyboard-navigable components) and cross-browser consistency across both products as standard development practice.
- Redesigned responsive layouts using Bootstrap and CSS to improve mobile usability for an e-commerce web application.

EDUCATION

Bachelor of Engineering in Electronics & Telecommunication | Shivaji University, Kolhapur | 2019

CERTIFICATIONS

- Namaste React — Advanced React.js & Hooks-focused cohort program | 2025
- React JS Web Development — The Essentials Bootcamp | 2020–2021
